List of Publications (Markus Flury)

The $H$-index of my refereed journal articles as of July 2012 is $H = 25$. The total number of citations of my articles is 2,442.

The $H$-index uses the highest number of papers a scientist has published that have each received at least that number of citations: for example, a researcher with an $H$ of 50 has written 50 papers that have each had at least 50 citations (see Nature 2005, 436: 900). The $H$-index is a cumulative measure of the quantity (number of papers) and the quality (number of citations). The $H$-index was calculated based on data taken from Web of Science, ISI Web of Knowledge, Institute of Scientific Information, The Thomson Corporation (http://portal.isiknowledge.com).

List of journals, number of articles published, and 5-year JCR Impact Factor:
